What's behind ?

This instance is hosted on a VPS at NiHost, in France. They provide a very good quality of service, and accepted to make a custom VPS for the needs of this instance. Thanks to them!

The VPS has the following specifications :

- 8 virtual cores of Intel Xeon E5-2650v3
- 16 GB of DDR4 RAM
- 100 GB of SSD in RAID 5
- 1 Gb/s unlimited bandwidth
- Debian 8

This server is backed up everyday on another one.

Here are some statistics. You can check all the graphs here.

Donations

You can donate to help me maintain this instance in the long term.

Here is what I have to pay :

- Domaine name: 35€/year
- Server: 16€/month (thanks to my partnership with NiHost)
- Backup server: 10€/month

I also run 4 Tor relays, so your money will always be put to good use ☺

I also invested a lot of time for this, dozens of hours of installing, tweaking, debugging, optimizing, monitoring, explaining, etc. I love it, it's my passion, but I do this on my free time, so any thanks for my work, financial or not, is really appreciated.

Don't forget to toot me @angristan if you made a donation. ☺

- Paypal They restricted my account because I'm not 18. Fuck them ! Cryptocurrencies don't ask for my age at least.
